

MacJava Broadcasts Video clips

From Auckland

Brian

MacJava uses video, animation, slide-shows, stills text and music to create files in a multimedia interface accesable from the customers homepage.

We capture content with a Canon digital video camera and a still camera.

Interviews and voice messages can be recorded and posted on the web.

Any aspect of your buissness or personal interests may be publicised using multimedia.

Walter

MacJava creates and broadcasts customised video on the world wide web.

We design and maintain a multimedia interface accesable from your home page. This will

enable you to broadcast video clips of any aspect of your buissness or interests on the internet

Examples of our work are best viewed online. See the URL's below.
